

WHEELBARROW (PRO SERIES)

The Impact-A PRO SERIES Wheelbarrow has been designed for trade and engineered to handle the toughest jobs on any worksite.

The Steel Tub is 1.2mm thick and can handle the hardest, heaviest knocks. It has a concealed fastening design, which allows you to mix concrete or mortar without hitting any exposed fittings.

It has been designed to load bricks, rocks and rubble, as well as any type of coarse or soft materials.

Heavy duty 60mm x 35mm handles support the steel tub, and the 40mm hardened steel legs and stabiliser bars will withstand heavy loading and be reliable when it matters most.

The wheels have a heavy-duty steel rim fitted with dual high-quality heavy-duty bearings, and a FAT 4ply pneumatic tyre.

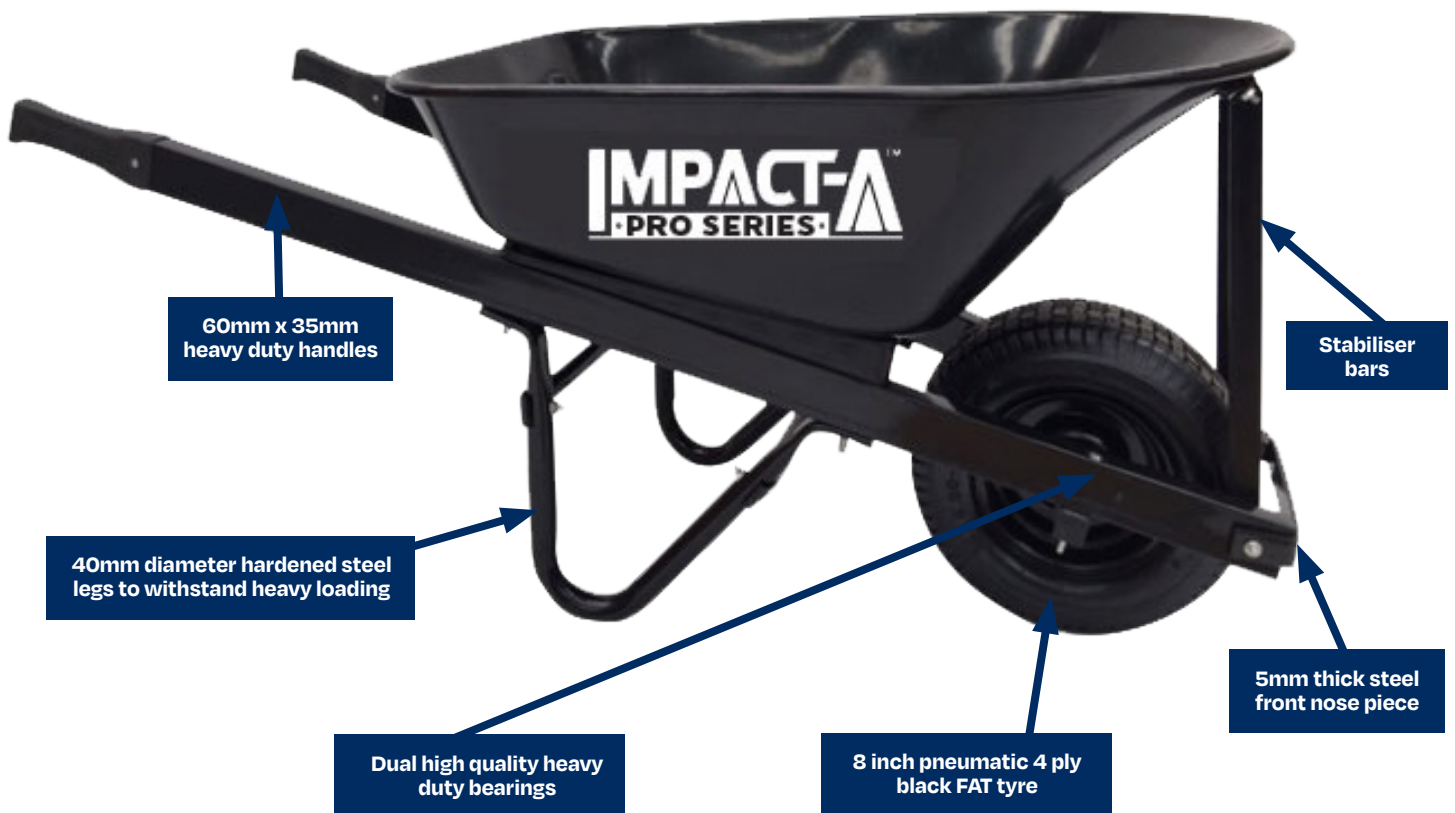

This combination provides the user with less push resistance and excellent stability on any surface type.

Key Features

- 200kg holding capacity
- 1.2mm lock fast steel tub powder coated black
- Heavy duty handles with terrific grip on ends
- 8 inch pneumatic 4 ply black FAT tyre provides good stability across many surfaces
- Heavy duty legs to withstand heavy loading
- Front support and nose guard are both heavy duty to handle unloading the largest loads
- Dual high quality heavy duty bearings provide less push resistance
- High ground clearance
- All parts as powder coated in lead free paint
